

# Seamless security for a hybrid world

Enterprise-grade security in reach of every business

Big or small, every business faces the risk of cyberattacks or data breaches. When data is at the core of what you do, you need to know it's secure. Especially in the modern workplace with hybrid work scenarios, reliable security allows you to get to work and focus on what really matters in your business.

## Security is top of mind for every business

- There has been a 300% increase in ransomware attacks in the past year, with more than 50% targeted at small businesses<sup>i</sup>
- Nearly one in four small and medium businesses reported a security breach in the last year<sup>ii</sup>
- The average cost of those data breaches was \$108,000<sup>iii</sup>
- Protecting confidential data and customer information is essential for business growth

## But it comes with challenges

- Without the appropriate solution, flexible and hybrid work can add security risks
- The cost of disjointed security solutions can drain resources from other areas of your business
- Implementing a complex security platform can stretch the IT capabilities of your team
- Using solutions from multiple vendors increases costs and leaves security gaps

## Microsoft Defender for Business: Work more securely from anywhere

01

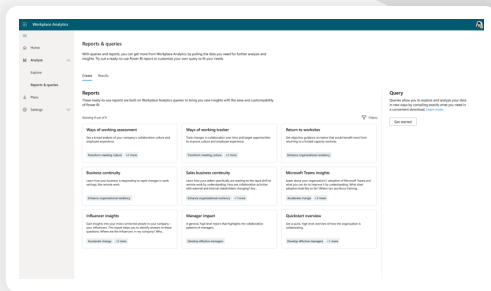

**Enable more secure remote work** from any device with centralized management of your users' desktops and work-enabled mobile devices. Easily onboard new devices when you need them.

02

**Keep data safer from unauthorized access** by enforcing strong passwords and multifactor authentication, blocking logins from risky locations and devices, and reducing your attack surface with powerful built-in tools.

03

**Monitor threats and security status in one place**, so you can defend against advanced attacks fast. Prevent installation of unwanted apps, and identify emerging threats before your business is targeted.
