

Instana

IBM Instana is a TrustRadius award-winning, cloud-native observability platform built to help developers spend less time troubleshooting and more time innovating. Instana users highlight its ease of use, full visibility, advanced automation, and high overall customer satisfaction that cements it as a quality observability tool.

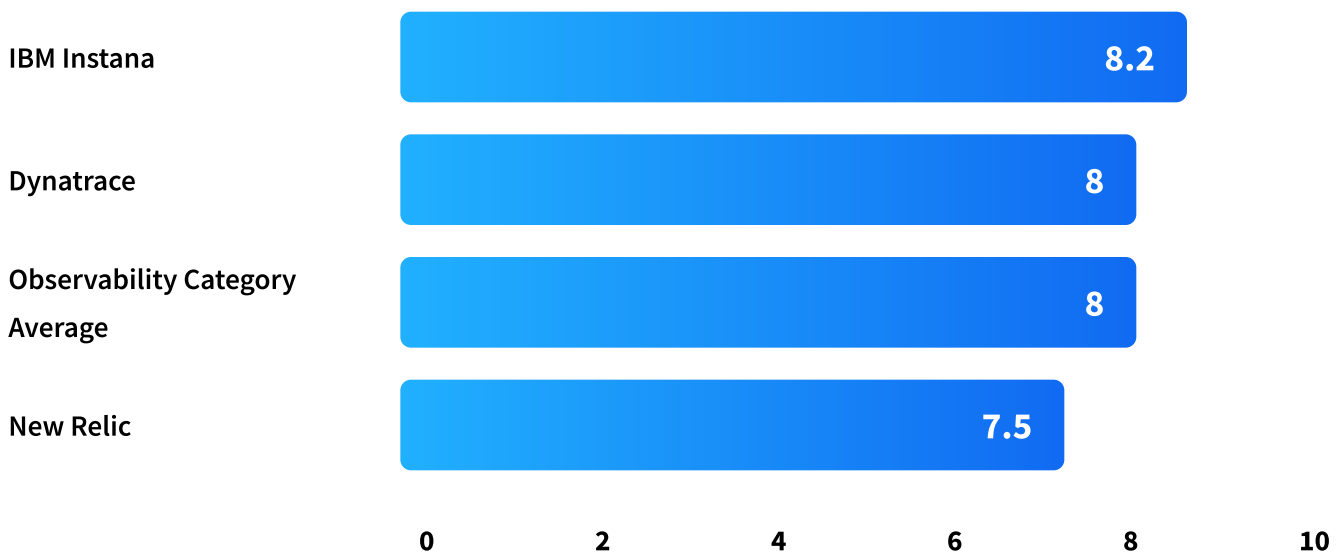

Ease of Use

Reviewers of IBM Instana rate its ease of use at an 8.2/10, beating both its observability category average and its competitors.

IBM Instana's ease of use vs competitors

IBM Instana's user friendly interface makes managing performance easy, no matter the level of difficulty.

"We have been using IBM Instana's monitoring tools for a few years now, and it has helped us overcome many obstacles in our project over the years. And with its user-friendly interface, intelligent warning system, and full stack monitoring, we had no problem in finding and managing performance-related problems, no matter how complicated it was."

Visibility and Automation

Instana provides full hybrid IT visibility, automates issue resolution, and offers real-time observability for fast bottleneck identification in cloud-native environments, improving performance monitoring and anomaly detection.

IBM Instana is helping this Vice President of Information Technology ensure they have end-to-end visibility across their hybrid IT environments.

"We use IBM Instana for real-time observability across our applications and infrastructure. It is helping us to monitor performance, detect anomalies early, and quickly pinpoint root cause. IBM Instana also provides us an end-to-end visibility across our hybrid IT environments."

IBM Instana's automation capabilities decreased the amount of time this user had to spend troubleshooting.

"Automated actions help fixing known issues without human intervention. Instana provides code-level tracing allowing SRE team to pinpoint performance bottlenecks. Its continuous profiling helps identify hot spots and optimize application performance."

Mohamed Saad | Senior Technical Consultant at Ejada Systems | Information Technology & Services, 1001-5000 employees Incentivized

Instana automated observability makes it ideal for identifying bottlenecks in dynamic environments.

"IBM Instana excels in real-time, automated observability with minimal configuration, making it ideal for dynamic, cloud-native environments. The level of insights Instana provides as an APM helps teams to identify the bottlenecks easily. Reducing the manual time for in finding the root cause."

Overall Customer Satisfaction

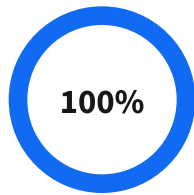

Every review on TrustRadius asks 5 key insights questions to give buyers a good look at how that product performs. IBM Instana had high ratings all around:

IBM Instana Key Insights

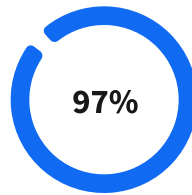

Would Buy Again

100% of TrustRadius reviewers said they would buy IBM Instana again.

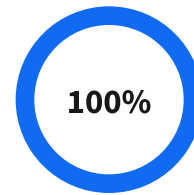

Happy with the Feature Set

100% of TrustRadius reviewers indicated being happy with IBM Instana's feature set.

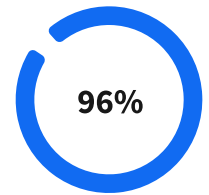

Implementation Went as Expected

97% of TrustRadius reviewers said implementation of IBM Instana went as expected.

Delivers Good Value for the Price

100% of TrustRadius reviewers said IBM Instana delivers good value for the price.

Lived up to Sales and Marketing Promises

96% of TrustRadius reviewers stated that IBM Instana lived up to sales and marketing promises.

Automatic analysis and real-time monitoring are some of Instana's core strengths.

"One of Instana's core strengths is its real-time monitoring and automatic root-cause analysis, which helps detect issues before they escalate into critical failures. [Instana] provides deep insights into application performance, monitoring everything from code-level performance to infrastructure interactions."
