

What is IBM Planning Analytics?

An AI-powered, integrated planning solution that simplifies and automates budgeting, forecasting, and reporting — enabling real-time analysis and seamless collaboration.

How can this help my business:

Automates Planning Cycles

Streamlines budgeting and forecasting so teams spend less time on manual consolidation and more time on decision-making.

Keeps the Excel Experience finance trusts

Works within a familiar spreadsheet interface, enhanced with a generative AI assistant, reducing change resistance and speeding adoption.

Enables real-time scenario planning

Run fine-grain and large-scale what if scenarios in real time to respond faster to business change.

Where do I start?

Start with one module, then scale to connect planning across the enterprise as needs grow.
